

Musicoverly releases the feature « alternative versions »

Paris – 13 October 2008

Musicoverly releases a new feature to its webradio : the «alternative versions» of a song. Around a song of a playlist are displayed alternative versions (live version, acoustic version, remixes, samples or interpretation by other artists). As much as possible the original version or the one deemed as the reference will be proposed.

Alternative versions can be included in the playlist or be played directly.

Musicoverly's audience is currently about 700.000 visitors/month.
